

FTL-F UNITS

20, 30 or 40 Piloted Units

The FTL-F Series ignition unit is engineered for continuous pilot operation in flare applications. By utilizing flame front generation technology, critical ignition components are relocated away from the extreme flare environment, significantly enhancing system reliability and service life.

Features

- Piloted
- Pilot for Combustors and Enclosed Flares
- Gas Inlet: 1/4-Inch NPT
- Flame Sensing with Thermocouple

The SureFire Difference:

- ✓ Eliminates spark ignition systems
- ✓ Elimination of manual ignition
- ✓ Reduced maintenance requirements
- ✓ Patented system design
- ✓ No ignition coil required
- ✓ Flame front generation technology

APPLICATIONS

Flare

Combustor
